

## **Code of Ethics in Social Work Research**

- 1 A Researcher shall exercise due care in gathering and processing data, taking all reasonable steps to assume the accuracy of results.
- 2 A Researcher shall exercise due care in the Development of research designs and in the analysis of data.
- 3 A Researcher shall cooperate with legally authorized representatives of the public by describing the methods used in his studies.
- 4 A Researcher shall not cite his membership of the research centre as an evidence of professional competence.
- 5 A Researcher shall not lie to survey respondents or use practices and methods which abuse, coerce or humiliate them.
- 6 A Researcher must adhere to the norms of anonymity and confidentiality.
- 7 A Researcher must be mindful of the limitations of his techniques and facilities and shall accept only those research assignments which can be accomplished within these limitations.

A Researcher must have a zest for work. The subject or the problem selected must involve the researcher and must have an upper most place in his mind so that he may undertake all pains needed for the study.
